

Irrigation Meter Program For Commercial and Industrial Customers

From March 1 through November 30 non-residential customers may be eligible and benefit from participating in the Irrigation Meter Program for the measurement of the non-wastewater flows during this time period. **Facilities with a minimum of 1,000 sq. ft. of irrigated property, or non-discharge activities such as evaporative cooling systems may apply for an “irrigation” or sub-meter to measure non-discharge consumption.**

The following parameters apply to participation in the program:

- Installation and purchase of the sub-meter is the customer’s responsibility.
 - Must be a direct read water meter.
- Boxelder staff **must** inspect the installation. The water service provider may also require an inspection.
- The serial number of the meter will be recorded and an initial read taken.
- The user is responsible for self-reporting irrigation/non-discharge water meter reading **monthly**, prior to the 15th of the month (to coordinate with the reading from the water service provider) for the monthly credit adjustment. District staff will take periodic meter readings.
 - ***Note***: If readings are not received prior to the 15th of the month in a given month, you will be removed from the credit program for the remainder of the year. No credit will be given beyond that point.
- No credit is given for metered irrigation use for the time period of December 1 through February 28. Unless you are on a Yearly Program.
- The user is responsible for maintenance and/or replacement of the meter. It is advisable to protect the irrigation meter from freezing.
- If a meter fails and needs to be replaced, the District will need to take the final read of the non-functioning meter and record the serial number and initial read of the new meter. **Contact the office before trading out a failed meter.**

Contact the District office with any questions or to apply for this program.
